                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SXSX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents a chimeric protein, which contains an N-terminal fragment of human growth hormone (hGH) of the sequence given in AAP42885, a cleavable peptide linker (AAY4285), and a human insuiin precursor comprising insulin A and B chains (AAY42859). The hGH portion of the chimeric protein acts as an intramolecular chaperone (IMC) for the insulin precursor, enabling it to fold correctly. The cleavable ceptide linker has a C-terminal Arg residue which enables the hGH portion of the chimeric protein at provise human insulin via an hGH-proinsuin chimeric protein can provise human insulin with correctly linked cysteine bridges with fewer necessary procedural steps, and hence resulting in a higher yield of human insulin. The IMC sequences not only protect insulin sequences from intracellular degradation by a microorganism host, but sopenences from intracellular degradation by a microorganism host, but show promote the folding of the fuscon insulin and decrease the internolecular colubility of the fusion protein and decrease the internolecular colubility of the fusion proteins, thus allowing folding of the received insulin precursor at commercially useful high concentrations. The procedural steps of cyanogen bromide cleavage, oxidative sulphitolysis and related purification steps can thus be eliminated, along with the use of high concentrations of mercaptan or the use of hydrophobic absorbect
                                                                                                                                                ÷:
   protein, which contains a thrombin recognition site, and bumman beta nerve
            growth factor (beta NGF) at the C-termina. Beta-NGF can be used to control geriatric dementia and other nervous disorders, and can be released from the fusion protein by incubation with thrombin (see AAN90577-8, AAP91034, AAP91299).

```
N-terminal end (1st region), a 3 amino acid sequence representing thrombin recognition site, and human beta nerve growth factor (beta-NGF) at the C-terminal. Beta-NGF can be used to control geriatric dementia and ether nervous disorders, and can be released from the fusion protein by incubation with thrombin (see AAN90577-8, AAP91034,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New human nerve growth factor gene encoding fusion protein having cleavage site for thrombin, useful for treating geriatric

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention describes novel human anti-anglogenic peptides derived from 10 to 150 consecutive amino acids selected from the N-terminal cnd of from 10 to 150 consecutive amino acids selected from the N-terminal cnd of human placeth hormone (hGH) growth commone variant (hGH-V), or human probation. Such peptides (i) inhibit capillary endothelial cell proliferation and organisation (ii) inhibit anglogenesis in chick choicelantoir membrane and (iii) binds to at capillary endothelial cell proliferation and organisation (ii) inhibit angionessing a probable abnormality of placental vascularisation during prequancy. The peptides can he used for treating an anglogenic disease in modulating vascularisation of a patient's placental in particular, the peptides can be used for prevention arthritic such as rheumatoid anglotibroma, arteriovenous melformation arthritic such as rheumatoid carthritis, atherosciencia prodiferation arthritic such as rheumatoid carthritis, atherosciencia prodiferation grant and as those pocurring content proportion and prodiferation such as those pocurring such as supporting your as content would healing the prodiferation arthritis such as those pocurring such as supporting to a such as such as such as importance of the produces of the prodiferation are not as those pocurring such as supporting to modularial such as such 
                                                                          numan; anti-anglogenic; projectin; placental lactoment STD; anglosenss: growth hormone; hGB; hGH-V; capiliary endoLoila; eth profiteration; pracental vascularisation; preparancy; steatment; endingent; dispersor tumour; inhibitor; malignant; anglofibroma; arteriovencus malignant; anglofibroma; arteriovencus malignant; anglofibroma; arteriovencus malignant; anglogis profiterative reclinopathy; manilar mechanismalario; glaucoma; ocalis; uveitis; tracture; Osier-Weber syndroma; psorhasis; fibroplasia; sceroderma; Kapopathy; manilar denomeration; ulcer; leikaemia; reproductive disorder; conframenty; pre-eclampsia; intrautorine arowth retardation; placental dysfunction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         pyogenic glaucoma, retrolental fibroplasia, scierodérma, solid turnours. Asposi's sarcoma, trachona, vascular adhosions, chronic varieose eletas. Leukaemia, and reproductive disorders such as follicular and luteal eyste and choriocarcinoma. They can also be used as contraceptive ugents. INA encoding the peptides can be used in gone therapy. The measurement of abnormal levels of Kiterminal Iraqments of hGB. EGH. V, prolactic or hit can be used in assays for implimment of vascular development associated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    mal levels of N-terminal fragments of hGH, fighty, prolactic cope used in assays for implirment of vascular development assoc pre-eclampsia, intrauterine growth retardation, and placental

can be produced as this fusion protein. It is purified by contacting a gei having a cation exchange qp. with the fusion protein, in the presence of urea. The purified protein is useful in a medicament for treating disorders of the nervous system, eg dementia. (Updated on 25-MAR-2063 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     interleuxin-6; B-cell differentiation;

The protein is produced by fusing DNA encoding BDF (IL-) with DNA encoding BSF-2 (IL-5) and ligating the product into an expression vector Sec also AAR05311 and AAR05313.

The polypeptide (AAFB1225) with somatomedin-like activity and the DNA (AANB165) emcoding it are claimed. A Met residual gp. may be added to the N-Terminal. The polypeptide acts on the bone structure of mammals, including humans, to promote bone growth. The polypeptide has high production rate and is easily extracted from bacterial culture medium and retined for use as a bone growth accelerator.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A.Molecule type: protein
A.Rolecule type: protein
B.Rolecule type: protein
A.Rolecule type: protein demain of its receptor: protein
A.Rolecule: annotation: X-ray crystallography, 2.8 amstroms
A.Rolecule: the structure of the complex with growth hormone receptor is described

A. Residues: 27-44.46-57 cFRA.

A. Mode: partial glycosylation was demonstrated by lection binding

C. Comment: This gene is expressed by the placenta.

A. Gene: OBB-GH.

Submitted (APR-2001) to the EMEL/Genbank/DDBJ databases.

-!- FUNCTION: Plays an important role in growth control. Its major role in stimulating body growth is to stimulate the liver and other ilssues to secrete 187-1. It stimulates both the differentiation and proliferation of myoblasts. It also stimulates amino acid uptake and protein synthesis in muscle and other

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         the European Bioinformatics Institute. There are no restrictions on its use by non-profit institutions as long as its content is in no way
FUNCTION: Plays an important role in growth control. Its major role in stimulating body growth is to stimulate the liver and other tissues to secrete 16F-1. It stimulates both the differentiation and proliferation of myoblasts. It also stimulates amino acid uptake and protein synthesis in muscle and other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         differentiation and proliferation of myoblasts. It also stimulates amino acid uptake and protein synthesis in muscle and other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Submitted (APR-2001) to the EMBL/GenBank/DDBJ databases.
-:-FUNCTION: Plays an important role in growth control. Its major role in stimulating body growth is to stimulate the liver and other tissues to secrete IGP-1. It stimulates both the

"Structural studies of tryptic peptides from large cranouth broadle

fragments of sei whale (Balainoptera borealis) somatorropin.":

Bloorg. Khim. 4:1589-1599(1978).

-1-FUNCTION: Plays an important role in growth control. Its mujor

role in stimulating body growth is a stimulate the liver and
other tissues to secrete 197-. It stimulates both the

differentiation and preliferation of myoblasts, It also stimulates
amino acid uptake and protein synthesis in miscle and other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

-!- FUNCION: Plays an important role in growth control. Its major role in stimulating body growth is to stimulate he liver and other tissues to secrete (GF-1. It stimulates both the differentiation and proliferation of myobiasts. It also stimulates amino acid uptake and protein synthesis in muscle and other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

FUNCTION: Plays an important role in growth rolled. Its major role in stimulating body growth is to simulate that liver and other tissues to screele ideal. It stimulates body the differentiation and proliferation of mycoblasts. It also stimulates amino acid uptake and proliferation of mycoblasts. It also stimulates amino acid uptake and proliferation synthesis in miscle and orbits successive subsciences of stimulations. Secreted.

SURGELLUIAR LOCALION: Secreted.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
